

ZANESVILLE WORKS

Our Facilities:

Zanesville Works is located on the Muskingum River in east central Ohio. The Zanesville Works finishing facilities for AK Steel electrical and stainless lines bring specialty flat rolled process and product technology together with steels that meet the exact specifications and delivery requirements of our customers.

Major production facilities include the following:

- Anneal and pickle lines
- Three strip anneal lines
- Electric box annealing furnaces
- Sendzimir (Z) mill
- Two coating lines
- One pickle/coat line
- Slitting line

Our Products

Steels from Zanesville Works include:

Finished Regular Grain-Oriented electric steel grades for power and distribution transformers offer an outstanding degree of grain orientation. The result is far lower transformer core loss than possible with non-oriented electrical steels.

Cold Rolled Non-Oriented (CRNO) electrical steel grades in which magnetic properties are practically the same in any direction of magnetism. Non-oriented grades have superior permeability at high inductions, low average core loss and good gauge uniformity.

Chrome (ferritic) stainless steel grades that are used in applications that need to withstand extreme heat and corrosive conditions.

Zanesville's specialty flat rolled steels enable customers to create a variety of products, including motors, generators, transformers and a host of other electrical devices.

Quality

The plant is also a recipient of several customer quality awards.

Safety First and First in Safety

Our safety programs are the most comprehensive in the steel industry. In fact, AK Steel leads the industry in safety.

Product Information

Contact an AK Steel sales office for chemical composition, mechanical properties, gauge and width ranges, mill limits and other detailed product information. Call 800-331-5050 for customer service.
